# 5G-SA Starter Kits

A quick and easy way to get started with a 5G-SA private network

The Athonet 5G-SA Starter Kit is a ready-to-use 5G-SA network realised by Athonet, a Hewlett Packard Enterprise acquisition. It was designed to help you step into 5G-SA starting with the industry's premier 5G-SA core platform that supports high data performance and VoNR. The kit includes SIM cards, a choice of radio that best fits your business and all the components needed to get started with a 5G-SA network.

You can start with a Software Kit to fit into your existing infrastructure or host in the cloud or get the Large Kit to see a bigger coverage area. If you have specific needs, there is a Build-Your-Own Kit that allows you to choose different components to fit your need. With each one, you can upgrade and scale up the network as your use-case and business requirements grow.

The world is moving to a new paradigm of millions of localized 5G or LTE networks that inter-work with each other, the cloud or macro-networks.

Athonet, a Hewlett Packard Enterprise acquisition is leading this transformation with our next-generation mobile network platform for private network use in enterprises, public safety and next-generation mobile network operators.

Built on our proven mobile core platform, we help IT professionals deploy a mobile network in a highly intuitive and IT-centric way while offering the carrier-grade features and performance of large national networks.

Beginning with the Athonet mobile core platform, users can add any make of 5G or LTE radios to create best-of-breed networks that suit their own use-case and budget. In addition, we provide a complete solution for mobile operators, integrators and large end-users to orchestrate, deploy and manage thousands of local networks.
