## CBRS Starter Kits

A quick and easy way to get started with a CBRS wireless network

The Athonet CBRS Starter Kit is a ready-to-use CBRS private network, realised by Athonet, a Hewlett Packard Enterprise acquisition. It is designed to be the first easy step to a high performing private 4G LTE Network that is easy to manage, scale, and deploy. Depending on your situation, you may opt for a cloud solution that comes with a CBRS radio and SIM cards, or any size on premise solution that comes with an Athonet server, CBRS radios and SIM cards. Select from several add-on features including IMS for Voice Over LTE capabilities, Monitoring solutions, location services, and eSIM.

You can start with a small or cloud try-n-buy solution to test if LTE is right for you, or you can tailor, upgrade and upscale your network as your use-cases and business requirements grow.

The world is moving to a new paradigm of millions of localized 5G or LTE networks that inter-work with each other, the cloud or macro-networks.

Athonet is leading this transformation with our next-generation mobile network platform for private network use in enterprises, public safety and next-generation mobile network operators.

Built on our proven mobile core platform, we help IT professionals deploy a mobile network in a highly intuitive and IT-centric way while offering the carrier-grade features and performance of large national networks.

Beginning with the Athonet mobile core platform, users can add any make of 5G or LTE radios to create best-of-breed networks that suit their own use-case and budget. In addition, we provide a complete solution for mobile operators, integrators and large end-users to orchestrate, deploy and manage thousands of local networks.
